**New comment in **Playtime Unit of Measurement****

Hi, Mark!

1. The data is in minutes, yes.
2. This particular data is parsed from SteamSpy. As for how it is calculated, I am not entirely sure, since SteamSpy API only has the following info for these columns:
 - average_forever - average playtime since March 2009. In minutes.
 - average_2weeks - average playtime in the last two weeks. In minutes.
 - median_forever - median playtime since March 2009. In minutes.
 - median_2weeks - median playtime in the last two weeks. In minutes.

Hope this helps!
